Web Announcement 1455

Insulin Quantity Limit Adjusted to Allow 65 to 120 Day Supply

Nevada Medicaid requires pharmacies to dispense a 90 day supply for maintenance medications. The Pharmacy Point of Sale (POS) System allows a window of 90 to 100 days to offer flexibility to the pharmacy and patient depending on the medication dispensed. Insulin products are limited in the quantity that can be dispensed and with the variable nature of dosing, a 90 to 100 day supply window was burdensome for pharmacies. The Pharmacy POS system has been updated to allow a window of 65 to 120 day supply for insulin products.
